

2200W PETROL GENERATOR

BT-PG 2000/1

QUICK START GUIDE

Easy steps to getting started.

1. Check the appliance wattage rating you wish to connect to the generator. DO NOT connect if they exceed 2200W*.
*- *This generator can operate up to 2200W for 2 mins. For efficient continuous power, we would recommend a wattage rating of 2000W.*
2. You must unplug any load from the generator before starting to prevent damage to any appliance.
3. Ensure that the engine has oil. This generator is supplied with NO OIL in the engine and the engine will not start without it. Please use SAE #30 4 stroke oil.
4. Fuel the generator with Unleaded fuel and check the level via the fuel gauge.
5. It is advisable to properly earth-ground (4) your generator before starting using a wire and a small earth stake. Note: The wire and earth stake are not supplied with the unit.
6. Open the petrol cock (13) by turning it down.
7. Move the ON/OFF switch (10) to position "ON".
8. Move the choke lever (11) to position IØI.
9. Start the engine with the reversing starter (12) by pulling the handle forcefully. If the engine does not start, pull the handle again.
10. Push the choke lever (11) back again after the engine has started.

**11. IF IN DOUBT PLEASE REFER TO THE
MANUAL PROVIDED.**
