

DIGITAL INVERTER GENERATOR

1000W

BT-PG 900

QUICK START GUIDE

Easy steps to getting started.

1. Check the appliance wattage rating you wish to connect to the generator. DO NOT connect if they exceed 900W.
2. You must unplug any load from the generator before starting to prevent damage to any appliance.
3. Ensure that the engine has oil otherwise it will not start. Please use SAE 30, 4 - stroke oil.
4. Fuel the generator with Unleaded fuel. **Note: Do not use ethanol blended fuel as this may result in engine failure.**
5. It is advisable to properly earth-ground (8) your generator before starting using an earthing cable and (e.g.) an earthing rod. **Note: Cable and earthing rod are not supplied.**
6. Move the ventilation switch on the tank cover to the ON position (A).
7. Open the petrol cock (3) by turning it horizontal.
8. Move the ON/OFF switch (7) to the "I" position.
9. Pull the choke lever (16) to position "choke".
10. Start the engine with the starter cord (4) by pulling the handle strongly. If the engine does not start, pull the handle again.
11. Push the choke lever (16) back approximately 15 to 30 seconds after the engine has started.
12. **IF IN DOUBT PLEASE REFER TO THE MANUAL PROVIDED.**
