## Automatic Water Works

The automatic water works consists of a garden pump in connection with an electronic flow switch. External water resources, e. g. rain water reservoirs can be used for irrigation or industrial water supply. The electronic flow switch automatically turns on the water works, when water is required and shuts it off, when no more water is needed, i. e. when the water tap closed. The thermal-cut-off protector switch saves the pump from overheating. In case of the water supply runs dry, the pump is protected by the dry run protection. Furthermore the garden pump is equipped with a pre-filter, which prevents that dirt arrives into the pump inside.
